

Hidden Figures: Counting

You can find numbers in nature by counting.

1. Find a place with nature.
2. Count as many things as you can. Write down the numbers.
3. Add words and pictures to show what the numbers mean.

Count numbers of individual organisms.		Count numbers of parts of an organism.		<i>4 rocks taller than my knee near the field</i>
<i>27 of these flowers in the field</i>	<i>5 petals on each flower</i>	Count nonliving things.	Add words to say what your numbers mean.	

Write a question about what you counted.

I wonder
